STATE PARKS AND TRAILS

### AREA OVERVIEW

## ABOUT THE WATER TRAIL

Beginning at Minnesota Point, this water trail segment heads northeast past low cliffs, stately mansions and cobblestone beaches. It also encompasses the estuary of the St. Louis River, where the world's longest freshwater sandspit protects undeveloped backwaters and industrial waterfront from Lake Superior waves. You'll find a maze of bays that offer paddling options when the lake has less than ideal conditions.

Shipwrecks are tragic reminders of Lake Superior's power, something that no paddler should underestimate. Lake cliffs can be serious hazards to the unwary. Calm summer waters can change to life-threatening conditions in minutes and cliff areas can prevent you from seeking safety on shore. A paddler must be prepared to deal with conditions and have the paddling skills needed to ensure their safety. Local marine weather forecasts should be monitored before and during any trip on the lake. You should understand how these forecasts can help predict lake conditions. Wave heights can be greatly increased by shoreline features and currents.

Make sure you know the nautical rules of the road.

## TRIP PLANNING AND SAFETY

- Plan your trip with a map and tell someone your plans before you leave.
- Make sure your route fits your experience and fitness levels. The average kayaking speed is 2-3 m.p.h.
- Travel with a companion or group and know everyone's skill level.
- Seek instruction and practice kayak skills, including rescues, before paddling on Lake Superior. Be certain your boat has adequate bow and stern flotation and a pump for emptying a flooded boat.
- Anticipate changes in weather, wind and waves by monitoring a weather or marine VHF radio.
- Study shoreline features and review exit points before launching. Cliffs may create water turbulence that prevents you from going ashore.
- Always wear a U.S. Coast Guard approved personal flotation device. Each paddler is required to have one readily accessible.

- Know the dangers of hypothermia and dress for cold water (32 to 50 degrees Fahrenheit). Cold water is a killer – wearing a wet or dry suit is strongly recommended.
- Pack a map, water, spray skirt, float for paddle, whistle, emergency flares, and a waterproof container with a first aid kit, matches and extra clothes.
- Fog can make visibility zero. Bring a compass and know how to use it.
- A bright white light must be displayed on each kayak or canoe after sunset to prevent a collision.
- Purchase a license for your non-motorized watercraft if it's more than 10 feet in length. If you're not from Minnesota, check your state's laws.
- **This map is not adequate for sole use as a navigational aid. Utilize USGS topographic maps and NOAA charts of the North Shore.**

## HARBOR SAFETY

- The Duluth/Superior Harbor is the largest freshwater port with both commercial and recreation vessels sharing the water. Large commercial vessels deserve respect. These ships need a long distance to stop, produce a large wake and often can't see paddle craft.
- Stay near the shore and well away from commercial vessels. Do not paddle in fog or other poor weather.
- Outgoing currents through the entrances of the Duluth-Superior Harbor can clash with incoming waves to create chaotic paddling conditions. Seek instruction and practice kayak skills before paddling from the harbor to Lake Superior. Be certain your boat has adequate bow and stern flotation and a pump for emptying a flooded boat.

## CAMPING

- Respect private property along the shore! Stop only at designated areas.
- Camp only in designated campsites.
- Campgrounds require fees and reservations, while watercraft campsites are available on a first-come, first-served basis. Find details at [mndnr.gov/lswt](http://mndnr.gov/lswt)
- Leave a clean campsite and carry out all trash.
- Be sanitary! Use designated toilet facilities or bury human waste away from the water.

## PROTECT THE LAKE

Your experience on the lake depends on a healthy environment. As you explore the beauty of this waterway, also do your best to protect it.

### Protect Your Waters

Before launching...before leaving

- Clean off aquatic plants and animals.
- Drain all water away from the landing.
- Dispose of unwanted bait in the trash.

### Buffer Protection

The Minnesota buffer law establishes new vegetation buffers along rivers, streams and ditches to help filter out chemicals and sediment before they reach waterways.
